

# How To Take An Oil Sample

Step 1: TURN ON ENGINE AND  
LET RUN FOR A FEW MINUTES  
Have your pump, sample bottle  
and tube ready

Step 2: Slightly unscrew  
copper grommet and  
push tube through.

Step 3: screw on  
sample bottle snugly.  
You are ready to  
sample!

Step 4: Insert  
tube into  
dipstick, make  
sure tube is deep,  
but isn't touching  
the bottom

Step 5: Pump, oil will fill  
sample bottle. When you  
have enough oil, slightly  
unscrew bottle to release  
pressure and oil will stop  
pumping. And you're done!

Step 6: Screw lid back on to sample bottle and  
fill out ALL paperwork and send it to us!

!!VERY IMPORTANT!!
